Virtual Symposium: Everything You Need to Know about Tablet PCs

May 17, 2006

Many businesses spread across a variety of verticals—from financial to health care—have embraced the Tablet PC and have added value to their operations with enhanced productivity and improved business processes.

The Tablet PC is an evolution of the portable PC taking the standards of a laptop computer and adding pen or voice features making it ideal for those tasks where a keyboard would be obtrusive. The Tablet PC market is due to grow to \$5.4 billion in 2009 from \$1.2 billion, according to research by In-Stat. And with that companies outside of the vertical markets originally targeted by the Tablet PC are beginning to purchase these machines as their prices decline and their ease of use and functionality increase.

On May 24 at 12 p.m. ET, join Aaron Goldberg, Vice President, Ziff Davis Media Market Experts Group, for this Virtual Symposium dedicated to the Tablet PC and learn about the industries and companies taking advantage of the unique form and functionality the Tablet PC offers from Laura DiDio, Research Fellow, Application Infrastructure and Software Platforms, The Yankee Group; Gregg Malkary, Founder and Managing Director, Spyglass Consulting Group; Tom Farrell, Associate Professor, College of Business and Information Systems, Dakota State University; and Frank Gocinski, Business Development Manager on the Tablet Product Development Team, Microsoft Corp.

To help you get the most value out of this virtual symposium, we've put together a suggested reading list that will bring you up to date on Tablet PCs news and analysis. Be sure to bring your questions for the real-time Q&A session!
